

Bringing the Best Care to You

Clinical Video Telehealth

(CVT)

Patients instantly love it...
Veterans appreciate that
they get the same quality
of care from me without
having to travel.

What is CVT?

Clinical Video Telehealth (CVT) uses video conferencing technology to conveniently, securely, and quickly provide you with access to health care services from remote locations. CVT instantly connects a Veteran in one location with a healthcare provider in a different location. This connection allows for real-time interaction between you and your provider. Special equipment provides a safe, reliable, and accurate way for providers to assess a patient and manage their treatment without physically being in the same location.

What is CVT like to use?

CVT appointments feel a lot like traditional face-to-face appointments. When you come to your scheduled appointment, a staff member will escort you to the CVT equipped room. The television monitor and cameras will be set up, so that you and your provider can both see and hear each other clearly. When your visit is over, you will let the staff know, take care of any business or follow-up appointment scheduling, and then go about your day.

Why should I use CVT?

CVT helps you access the best health-care without having you make long trips to go see a specialist in person. Using advanced technology, our doctors can provide you with the care you need by CVT as effectively as they can with a traditional face-to-face appointment.

- **Secure**
- **Effective**
- **Convenient**

CVT decreases your travel time.

CVT Services

CVT is a rapidly expanding option for quality and convenient care. Contact your local telehealth coordinator to learn about the services available in your area.

CVT Mission

Provide Veterans with the right care, at the right place, at the right time.

CVT Vision & Values

We want to provide our Veterans with the most convenient and high quality health care possible. CVT aims to make the local community the preferred place of care whenever possible, by bringing the best care to you. Trained health care providers are using health information technology to securely and sensitively deliver care and promote healing relationships.
